

# LugdunonManagementConsole

---

Allows you to manage your Lugdunon server with a text based GUI -

Official support sites: [Official Github Repo](#) - [Official Forum](#)

---

Edit "lmc" and change the settings at the top if your lugdunon server is not in /home/lugowner/lugdunon.

You will need to run cpan and install these modules:

- `cpan -i UI::Dialog`
- `cpan -i Term::ReadKey`
- `cpan -i Term::ANSIScreen`
- `cpan -i Proc::ProcessTable`

You also need to have my Lugdunon Startup Scripts and Backup Scripts installed.

I suggest you add this directory to your PATH variable so you can run this script directly and can update it and use the new version easily.
